

# Diversity in STEM Toolkit

## COPYRIGHT

All video content must be your **own original work**. You must ensure you have **copyright approval** and **permission** to include images, audio or video created by anyone other than yourself. The **winning entries will be shared online** so it is critical that they comply with copyright law.

## MAKE IT YOURSELF!

This is the simplest way to avoid copyright headaches. In our last competition we saw **animation**, **reenactments** and **stop motion** all used to tell stories! These were some of the best entries. There are lots of **free**, **open-source** animation programs available online.

## FREE IMAGE LIBRARY

Source images from a **free image library**. There are many online sites that offer **public domain**, **royalty-free** and **Creative Commons** music and images that students can include in their videos.

## ASK FOR PERMISSION

Where possible, **ask** the person being profiled to provide images to use in your video. If you find something online you really want to use, ask the (c) holder for **permission** to use it in your video.

## CREATIVE COMMONS LICENSE

Find material that is available under a **creative commons license**. Creative Commons (CC) is a system of licenses that allows creators to give permission for others to use their work, like photos, music, or writing, under specific conditions.

## PRIVACY

If you chose to appear in your video, make sure you **protect** your **privacy**. Parental **consent** has been obtained for all participating children/students. For more info, refer to the **terms and conditions**.
